eComStation Application Pack 1.1

What is eComStation Application Pack?

We have had quite some comment on the price of eComStation 1.0, caused partly by the high royalties for included applications. Starting with Release 1.1 these applications are made available separately, as the Application Pack.

eComStation Application Pack contains:

- SmartSuite for OS/2 version 1.7 (IBM Lotus)
- HobLink X11 server (HobSoft)
- Applause Image Utility + Scannerdrivers (Solutions Technology)

This product is not available for the DBCS market (Japan, China) due to lack of applications in that version. Users of eComStation 1.0 will have access to the Applause utility and the scanner drivers without additional cost.

The applications in this bundle enable you to get the most out of your eComStation Operating System, by providing a Microsoft(r) Office(r) compatible Office application, an Xserver system to access your Linux or Unix computers on your eComStation Desktop and scannerdrivers plus an image manipulation program for the basic imaging needs.

Lotus SmartSuite provides you with a complete set of 32-bit desktop applications, with all the tools you need to streamline everyday business tasks - plus quick, easy ways to connect and collaborate with others. Whether you're creating a document, working with colleagues on a report, or communicating results via the Internet, SmartSuite helps you do it faster and better.

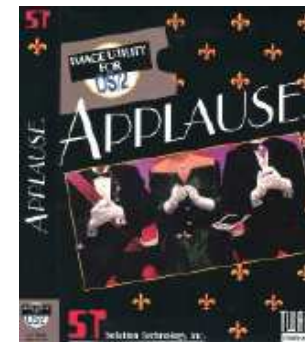

Hoblink X11

The main component of HOBLINK X11 is the X Server. This Multiple X Server allows you to execute several graphical applications (X Clients) concurrently - parallel to other eComStation applications. Different X clients can even be running on different network nodes. A heterogeneous network on a single PC appears as a uniform system to the PC user. HOBLINK X11 supports the current TCP/IP standards as well as the X Window

System (X11R6.4). The management of the windows can be handled either locally by eComStation or remotely using, for example, Desktop Window Manager, Motif or Open Look.

APPLAUSE supports scanning with TWAIN which means you can use any device supported by the provided TWAIN device driver pack.

APPLAUSE is a true 32 bit, high performance application which, lets you quickly navigate through any image. You can resize, crop, cut, and paste any scanned or loaded image. You can even convert from one image format to another.

Scan and manipulate images as large as you need in B&W, gray scale, 8 bit color, or 24 bit color

eComStation Multi Processor Pack 1.1

For people who desire to use the power of multi-processor workstations, the eComStation Multi Processor Pack is made available. This is the same Symmetric Multiple Processor support which IBM includes in server products at a significantly higher cost. Capable of supporting sixteen (16) processors, it has been designed but not tested to exceed that number. Most important, any user with supported hardware can benefit as this feature does not require that application software be modified to benefit from the additional processor availability.

eComStation Multi Processor Pack contains: a license to the SMP kernel and the required files on either CD or ESD.

A quick look at eComStation 1.1 Packs:

- gives you the opportunity to decide whether the extra expense is justified
- offers a highly integrated Office Suite, with Microsoft Office document compatibility
- offers integration of Unix/Linux applications on the eComStation Desktop
- Improved image editing and scanner support
- Multiple Processor Support package: 16 processors, possibly more, support for applications without modification
