StarOffice Registration

How to Register - Overview

Thank you for choosing StarOffice! For the exact license details of StarOffice, read the enclosed license document. Please note: StarOffice is neither Freeware nor Shareware!

During the Setup program, the license agreement will appear on your screen. Please read it carefully and then click the **ACCEPT** button in the installation dialog if you agree with the conditions and decide to install StarOffice.

A) You have downloaded the Personal Edition from our Web Server:

If you have loaded StarOffice from the Internet (www.stardivision.com), you must have already specified your personal data prior to the download. Based on this data, your Registration key and customer number will be generated and displayed on the screen.

If you've downloaded StarOffice from an FTP server, then you'll have to visit our web site (<http://www.stardivision.com>) one more time to obtain your personal key: Go to the "Download" section and fill out the form. You will then receive your personal key. Downloading StarOffice is not necessary, since you've already done so.

Enter again the exact information you have already given when filling out the registration form on the Internet. Enter the Registration Key and customer number in the registration dialog. You can protect yourself against spelling errors by using a clipboard.

Your StarOffice Personal Edition will be installed as an unrestricted version.

In case you change your user data, you must renew your registration within a 30-day period. Go to the "Download" section and complete the form. You will then receive your Personal key. Downloading StarOffice is no longer necessary since you've already done so. You will receive the new customer number and Registration key that are to be applied to remove the 30-day limitation from your version. In case you want to use the same original data again, the original Registration data will still be valid.

B) You ordered StarOffice directly from StarDivision.

If you ordered your Personal Edition Deluxe directly from StarDivision you will find on the bill and /or delivery note, under certain conditions, a media key, a customer

no. and a registration key. In case you do not find the registration key, please go to section C).

- ◆ Install your version by entering your customer no. and your registration key and the same data stated on the bill and delivery note. After you've done that, your installed version will be completely registered. A further registration won't be necessary.
- ◆ Install your version with the media key. It is up to you to enter the rest of the user's data. However, you must register your version by StarDivision within 30 days (concerning this, please read section C).

C) You've obtained StarOffice on a CD-ROM or it is already pre-installed on your new computer:

If you have received your StarOffice version on a CD-ROM, you will find the Media key for that version either on or within the package contents. The "Media key" represents an alpha-numeric code. You will need to enter your "Media key" when running the setup program.

The StarOffice you install(ed) with the 'Media Key', is limited to a 30-day time period. Within this period, you must register. You'll receive a customer no. and a registration key from StarDivision, with which you'll be able to use the unrestricted version from StarOffice.

By registering, you'll receive a customer no. and a registration key from StarDivision. To register, please read the information below.

The customer no. and the registration key are based on your personal data (first and last name, street, Zip-code, e-mail address, etc.) and your StarOffice version (edition and operating system). If you change your personal information, you will need to re-run a new registration within 30 days.

Please note that the Media key is enclosed within the contents of your StarOffice CD-ROM package. It is NOT possible to obtain a new Media key from the Internet. In case you encounter difficulties with this key, please contact the Star Division Customer Support.

If you don't have an e-mail address, please leave this field empty. You can register per mail, fax or e-mail (from another computer with Internet access) if you own the Personal Edition Deluxe version, or another higher level version (see below).

After installing the pre-installed or CD-ROM version...

With the media key, you'll receive the StarOffice 30 day version. During this period, you may change part of your personal user data under **TOOLS - OPTIONS - GENERAL...** and every time you start StarOffice, you will be reminded to Register for your unlimited StarOffice version.

If you answer **YES**, the **REGISTRATION FORM** will appear.

Here's where you can select the registration mode. You have the choice of: registering online with StarOffice or another web browser, and sending us a fax or a letter. For further information, please refer to the Registration form.

- ◆ Using your e-mail account - provided you have one - is the fastest way to obtain response.

In response to your registration, you will receive a Registration key and Customer number from Star Division. These keys must be kept at hand, since you will need this information the next time you start StarOffice:

- ◆ On your screen, you'll be questioned if you want to register or enable StarOffice. Please answer with Yes.
- ◆ You'll see the registration document, which displays once more, the different registration possibilities.
- ◆ Once you receive your registration key and customer no., please click on the **ENABLE KEY** button. The Enable Key dialog will appear.
- ◆ Enter your customer no. and your registration key and click the **ENABLE** button.

If you're registering online, the Registration key and customer number will be automatically processed so it is not necessary to type them in manually. In addition, your StarOffice will immediately become an unlimited version. Due to the enormous load on our web server, this process may take a few minutes! In any case, you will be sent an automatically generated e-mail with your customer number and Registration key.

Please be careful, when entering your registration key. If your code is not accepted for some reason, please try again. In most cases, spelling mistakes are the reason for registration problems.

Enter your customer number, i.e., the customer number that is currently valid and not another (former) customer number you might have been given by Star Division in the past. Only this current customer number is valid.

Your Registration key can be found at any time with the **HELP - menu's PRODUCT INFORMATION...** option.

This enables the unrestricted version. You will find your personal data (**USER DATA**) in the respective tab using the **TOOLS - OPTIONS - GENERAL...** menu.

Of course, Star Division will only process and store the data you specify for internal statistical and registration-related purposes.

Further information about the **REGISTRATION** dialog can be found in the StarOffice Help

StarOffice Installation

The StarOffice installation is easy and it is planned to be done without any problem. Please, read how to run the installation program and installation related notes. At the end, you will find further information concerning the deinstallation.

In the following section, both versions for network and single user installation are described. Note that you need a license for every user on the network. For detailed information concerning purchasing network licenses refer to the Star Division Sales department.

Installation Type	Purpose
SINGLE-USER INSTALLATION	StarOffice can be used on one computer only and with one user at a time.
NETWORK INSTALLATION	The entire installation of all components results from a network server. All individual user installations are based on this network installation. This installation is also known as Server Installation.
USER INSTALLATION	The installation for a single user on the network. The server ('s Network Installation) loads some components at runtime; the particular configuration and user-related files are stored on the user's area. The User Installation is also known as Workstation Installation.

For the single-user installation you have to login as an ordinary user on your operating system. Then you should install StarOffice in a sub-directory of the user's home directory.

The administrator in the Network Installation first installs StarOffice on a Network volume (Server Installation). After that every user can install any file in its own home directory (User Installation). (An administrator can also login as an ordinary user and install 'his' StarOffice USER INSTALLATION. However, it is strongly recommended NOT TO RUN StarOffice from the server installation).

General Installation Tips

You'll find important tips for the installation in the readme.txt files on the installation's CD. There is a readme.txt file in the CD's base directory and resp. in the platform specific directions in the office51 sub directory. We strongly recommend that you read the latest installation notes in the README file on the CD. The file contains the very latest information, that has only been available after the printed manual was produced.

- ◆ Insert the StarOffice 5.1 CD in your CD-ROM drive.

At any time, you can exit the installation using the **CANCEL** button. Of course, StarOffice will not run if you cancel the installation.

Notes

We tried to take the operating system differences into consideration in the StarOffice help.

However, the printed "User's Guide" was written for the StarOffice Windows version. In OS/2, not all functions may be applicable as described. The appropriate description can always be found in the StarOffice help where the most recent User's Guide processed and also contained.

In case you are not yet familiar with the expressions used in the printed User's Guide, find a table with the most important differences below:

Printed User's Guide	OS/2
Save File	Save File
"Cancel" (string on the button)	"Cancel" (string on the button)
Tabs (in the dialogs)	Pages (in the dialogs)
The sversion.ini file in the Windows directory	The sversion.ini file in the directory

Starting StarOffice

After the installation you will find a StarOffice 5.1 folder on your desktop.

In OS/2, use the Warp Center's Object menu. You'll see the list of the registered programs and program groups. One of the program groups is StarOffice 5.1.

In the StarOffice 5.1 group, you can see all the StarOffice programs. Use the Setup icon to modify, repair or reinstall the single components.

Contents of the Installation CD

You can find and install the current StarOffice in a CD, which supports only one platform in the /office51 directory. For multi platform CDs the directory names read as follows:

- ◆ Windows version: \windows\office51
- ◆ OS/2 version: os2\office51
- ◆ Linux version: linux/office51

- ◆ Solaris Sparc version: solaris/office51
- ◆ Solaris X86 version: solarisi/office51

Under OS/2, you'll find the StarOffice 5.1. version as follows:

X:\os2\office51 (with multi platform-CDs) or X:\office51
(X represents the placeholder for the drive letter of your CD drive)

Single User Installation

This version is suitable if you want to use StarOffice on a stand-alone PC for one or more users with their individual configuration (one user at a time).

Installation Requirements

Depending on the selected options, you will need anywhere from 110 to 140 MB free space in the directory where you install StarOffice. Some additional space (20 MB) is required during the installation for temporary files, which are automatically deleted after the installation is complete.

Starting the Single User Installation Setup Program

Login to the system with your user name (not as administrator).

If you have already installed a previous version of StarOffice, check if the .sversion.ini file can be found in your system directory. This file indicates the path and version number of the installed StarOffice version. If the installation you intend to run has the same version number, a new installation can only be run after the previous has been deinstalled.

Run the executable Setup.exe file from the correct directory (where the setup program is located) on the installation CD.

In OS/2, double-click the **SYSTEM** icon on the work area, then in the new window, double click the command line symbol and finally double-click the **OS/2 WINDOW IN THE LAST DIALOG**.

In the OS/2 window, enter the following command:

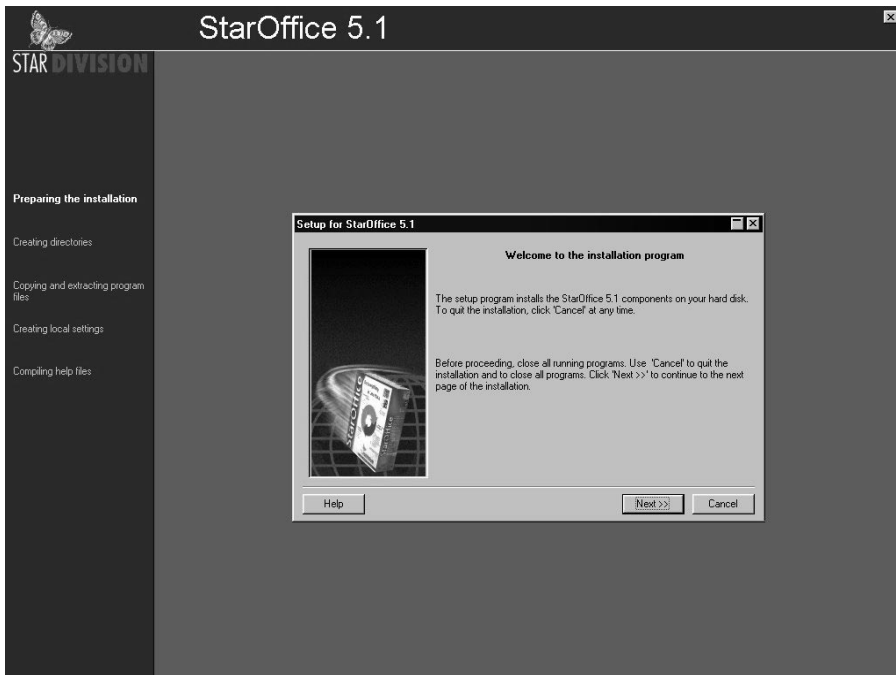

X:\os2\office51\setup.exe

and press the Return key. X represents the (kind of) placeholder for your CD ROM's drive letter and has to be replaced with the correct letter.

You can run the Single User installation without passing parameters, only the Network Installation requires such optional strings.

Now the setup program is initialized and started.

The Setup Dialogs

The setup program now offers **HELP** dialogs that can be activated using the respective button. Use the **BACK (!!!)** button to continue with the installation. **DO NOT** use the Close button. This would cancel the installation immediately!

- ♦ Confirm the Welcome dialog by clicking the **NEXT** button.

You see now a dialog which asks you to enter a key.

- ◆ Choose among the three options the one which corresponds to your StarOffice edition:

Registration Key

Choose this option, if you downloaded StarOffice from the Internet. You can also choose this option, if after purchasing your StarOffice Personal Edition Deluxe, you find a registration key with the invoice, or if you want to install StarOffice with the same user's data stated on the invoice.

When downloading StarOffice, you entered your User information and received a customer number and a registration key. However, if you bought the program directly from Star Division, you can find on your bill a customer no. and a registration key. This customer no. and registration key are only valid for the information stated on the bill.

If you loaded StarOffice from a different ftp-Server, you will not have a customer number or a registration key. Go to our http-Server (www.stardivision.com/freeoffice) and enter your information there, just as if you want to start a download. After this procedure, you will have your customer number and your registration key. You will not need to run the download again. You'll find more information concerning the StarOffice registration in our Homepage (www.stardivision.com) and in the StarOffice Help under "REGISTRATION".

Enter the customer no. and the registration key in the ENTER THE KEY CODE dialog. Please note that you'll again need to enter exactly these two numbers ENTER USER DATA dialog.

After that, your StarOffice version will be a completely installed full version. A further registration won't be necessary.

Company and Campus Key

Choose this option if you have a Star Division Company or Campus edition. Enter the data you received in your StarOffice version.

Media Key

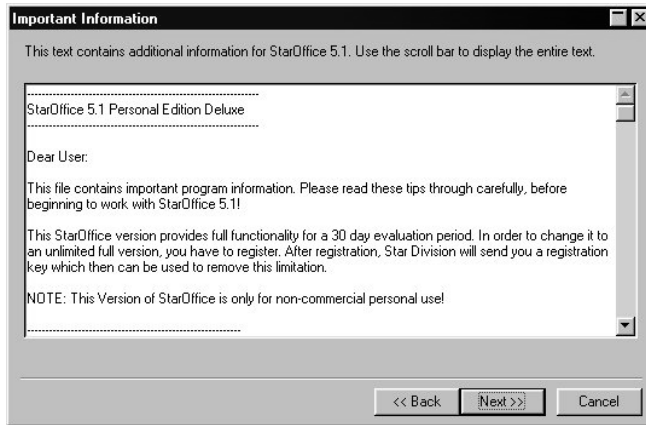

Select this option, if you received the StarOffice version in CD-ROM. Enter in the field your media key extra enclosed with your CD-ROM. That enables you to have a StarOffice 30 day version. That means, that within 30 days you have to register your version by StarOffice, so that it becomes a full registered version. The registration is cost free (apart from eventual online or postage costs). You can find further information concerning registration in our Homepage www.stardivision.com and in the StarOffice Help under "Registration".

- ♦ After entering the key, click NEXT.

You see now the ENTER USER DATA dialog.

- ♦ A dialog appears where you can enter your personal user data.
- ♦ The data you specify here will be automatically inserted in the fields of the letter, fax or business card templates from StarOffice.
- ♦ You will be able to access this dialog later on via menu TOOLS - OPTIONS - GENERAL... on the page USER DATA. On later modifications of these files a new registration might be necessary. Further information concerning User Data and Registration can be found in HELP - REGISTRATION.
- ♦ Click NEXT to continue the installation.
- ♦ A dialog will display again the registration's data depending on your installed edition.

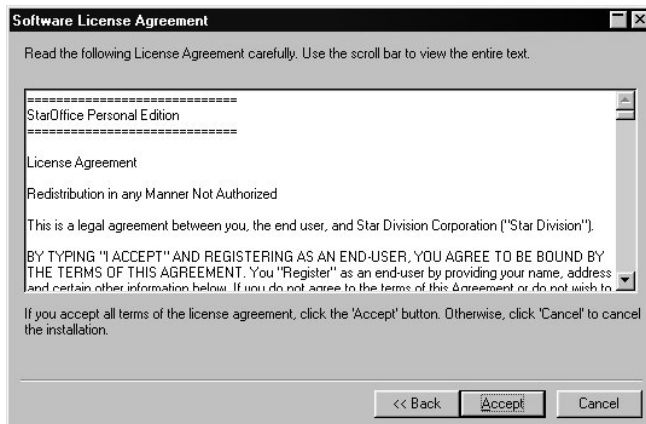

Now appears a window with the content of the readme.txt file. In the StarOffice directory, you can open and read this file after the installation.

- ◆ Read the readme file and confirm with a click on the NEXT button.

You see now a window with the license agreement.

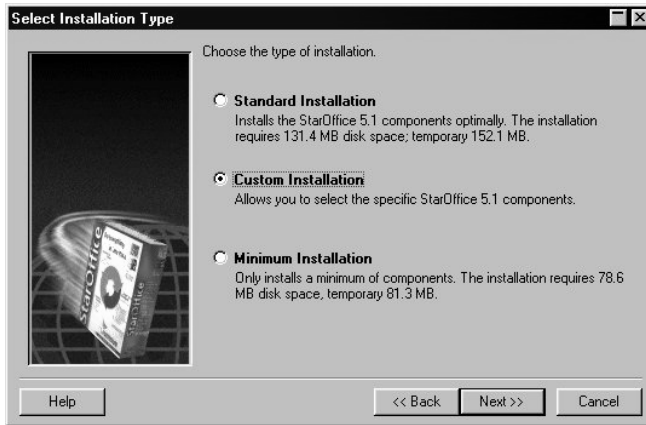

- ◆ Please read carefully the license agreement. If you agree on everything, click ACCEPT to continue the installation. If you do not agree with the license agreement, click CANCEL. In this case StarOffice won't be installed.

- ◆ Click ACCEPT if you read and accept the license conditions and you want to continue the installation.

You see the next dialog of the StarOffice Setup programs with the selection of the installation type.

The required disk space shown here is based on the cluster size of the next target volume (which contains enough free space).

For a normal user, the **STANDARD INSTALLATION** is recommended. In this case, all components are installed, and you will be prompted to specify the directory in which to install StarOffice.

In a **CUSTOM INSTALLATION** you can specify the individual components to be installed. If StarOffice is already installed (in this case, the Custom Installation option is named **MODIFY INSTALLATION**), this mode is used to re- or deinstall certain components. The dialog is also used to select the directory in which to install StarOffice.

The **MINIMUM INSTALLATION** only installs the basic components required in order to run StarOffice, excluding the help files and most of the samples and templates. This option is not recommended for a network installation.

Selecting the installation directory

After entering the required information, click Next. In the subsequent dialog, you can choose the desired installation directory.

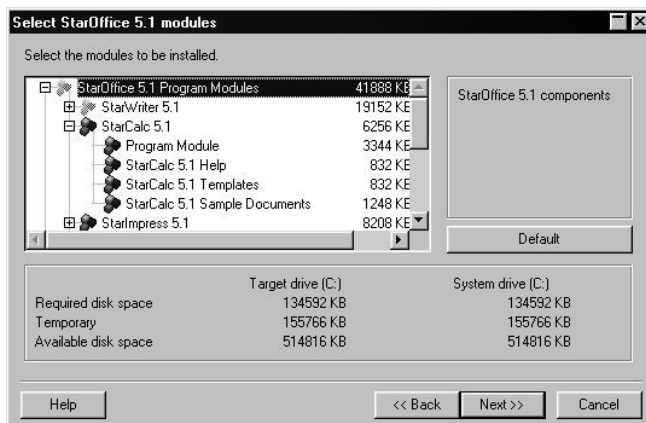

You can either **BROWSE** to select the directory where to install or type the path in the text box directly.

Click **NEXT**

Selecting Custom Installation Components

If you select the **CUSTOM INSTALLATION**, a dialog appears where you can choose any desired components.

By default, all options are selected, as indicated by the blue icons next to the respective components. If you wish to remove individual components, click a filled icon to deselect the option. Blank icons indicate components that will not be installed. A gray main group icon means that only some of the components are to be installed. Open the main groups by clicking on the plus sign beside the name, and select the components you wish to install by clicking the respective icon.

If you click the plus sign beside the name of a component, the list with sub-components appears. Here again, you can install the respective component by selecting the entry. Deselect a component if you do not wish to install it. If you select only some of the installable filters, for instance, the little boxes appear in gray.

In compliance with legal restrictions, the installation of the available linguistic modules (spell-checker and thesaurus) is limited to 3 modules at one time.

You can use the **DEFAULT** button, to restore the original settings.

- ♦ After you have chosen the desired modules, click the **NEXT** button.

Now starts the copying process.

Click the **COMPLETE** button to continue to the next dialog.

A dialog will be shown, which lists registered Java-versions in your system.

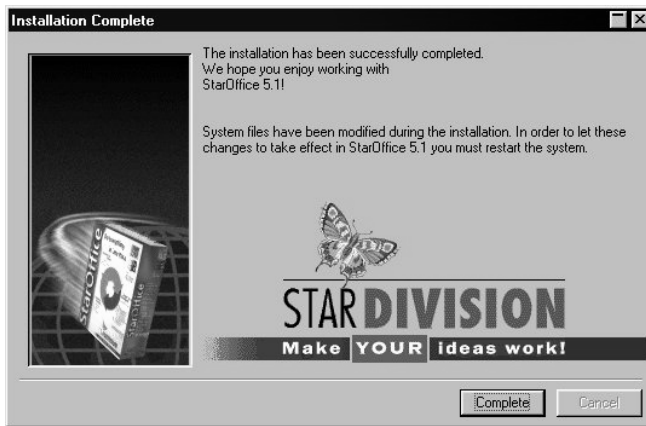

Choose here which Java runtime environment you want to use . StarOffice internally uses Java also for the processing of JavaScript You need to use the Java Runtime Environment of the 1.1.6 version or higher. If you've already installed a new version as 1.1.6, you don't need to install the standard version.

Select the desired option and click OK.

In the Setup main window, the progress of the installation is indicated.

The installation is now complete.

Click FINISH.

Now you see a dialog which informs you that you should restart your system before accessing StarOffice for the first time. This dialog appears depending on the selected components and from the operating system you currently use. With windows you see the the first time you accessed StarOffice in your system a request to restart i.e. if you installed with the integrator

In order to start the program, click the new StarOffice 5.1 icon on your desktop

Network Installation

The system administrator has to install StarOffice with the 'Network Installation' on the server on which the user installations will be based.

The installation of StarOffice as a network version occurs in two steps. First, you must login to the system as "root" user and use the "/net" option to install the complete StarOffice in the desired directory on the server, where user has After this SERVER INSTALLATION, each user can login to the system as usual and install StarOffice in their respective home directory. This is the USER INSTALLATION. Only a few necessary files are installed. (Do NOT run StarOffice as root from the Server Installation. An administrator can also login as an ordinary user and install 'his' StarOffice User installation.)

Installation Requirements on the Network Server

Depending on the selected options, you will need 140 MB free space in the directory where you install StarOffice. Some additional space (20 MB) is required during the installation for temporary files, which are automatically deleted after the installation is complete.

Starting the Setup Program on the Network Server

Login to the system as administrator (admin).

Execute the Setup.exe program from the installation directory on your CD using the /net parameter.

Activate the setup program as follows:

Double-click the SYSTEM icon, then in the new window the command line icon and the third window the OS/2 WINDOW.

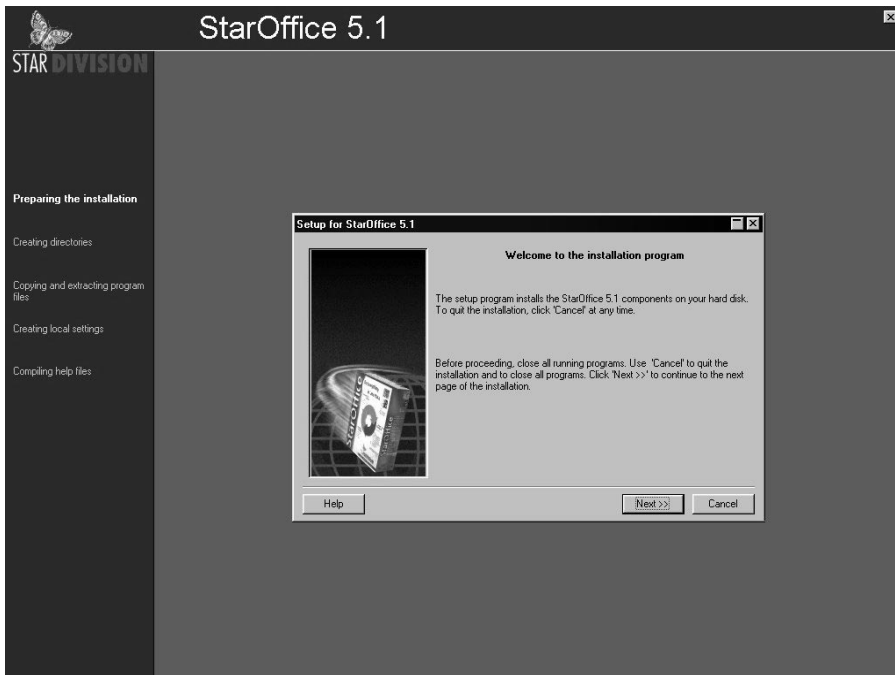

Type the following command in the OS/2 window:

X:\os2\office51\setup.exe /net

and press Enter. "X" stands for the respective drive letter of your CD ROM device and has to be replaced by the appropriate letter.

◆ (X represents the letter of your CD ROM drive)

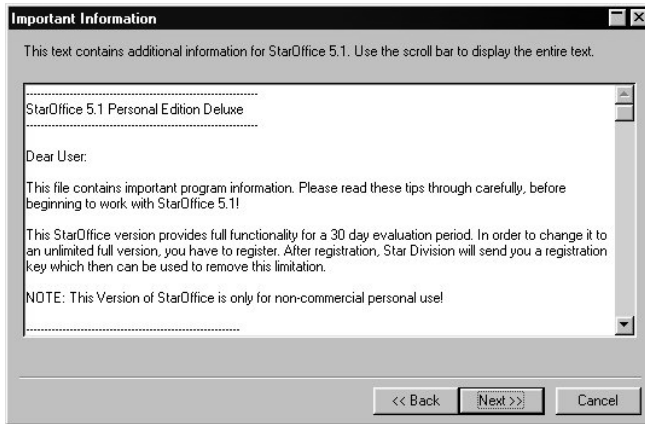

Dialogs in the Setup Program

The setup program now offers **HELP** dialogs that can be activated using the respective button. Use the **BACK (!!!)** button to continue with the installation. **DO NOT** use the Close button. This would cancel the installation immediately!

- ◆ Confirm the Welcome dialog by clicking the **NEXT** button.

Now appears a window with the content of the `readme.txt` file. In the StarOffice directory, you can open and read this file after the installation.

- ◆ Read the readme file and confirm with a click on the NEXT button.

You see now a window with the license agreement.

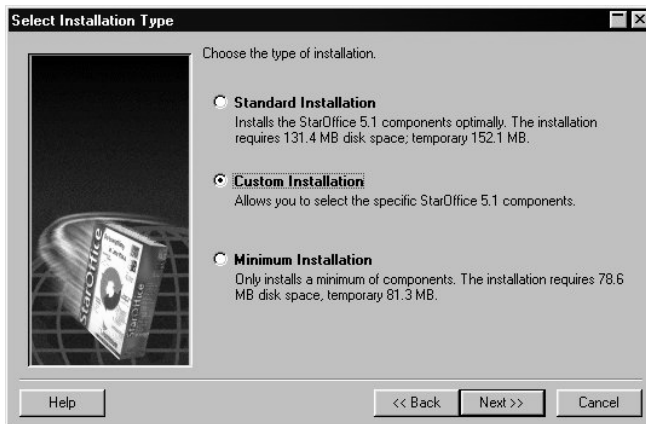

- ◆ Please read carefully the license agreement. If you agree on everything, click ACCEPT to continue the installation. If you do not agree with the license agreement, click CANCEL. In this case StarOffice won't be installed.

- ◆ Click ACCEPT if you read and accept the license conditions and you want to continue the installation.

You see the next dialog of the StarOffice Setup programs with the selection of the installation type.

The required disk space shown here is based on the cluster size of the next target volume (which contains enough free space).

When installing StarOffice on a network server in the Network Installation mode, you should select all components. Therefore, choose **CUSTOM INSTALLATION**, select a directory in the following dialog, and then select all available options in the next following dialog.

Choose **CUSTOM INSTALLATION** to select / deselect the available options. If StarOffice is already installed, this option can be used to modify (delete or add) your selections (in this case, the Custom Installation option is named **MODIFY INSTALLATION**).

Selecting the installation directory

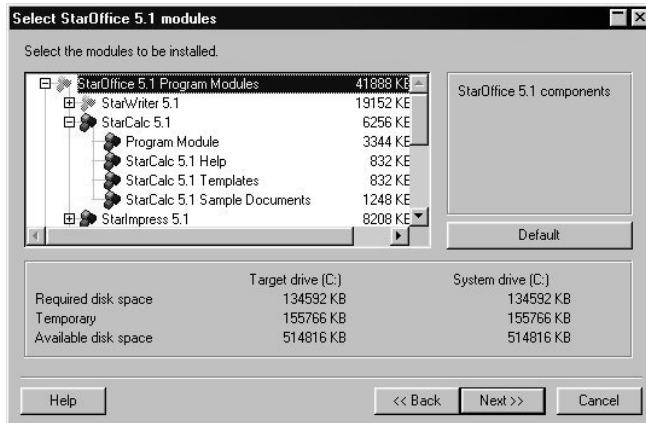

Once the installation type has been chosen, the Select Installation Directory dialog appears.

Click the **BROWSE** button to open the installation directory dialog or enter a pathname for the installation in the text field.

Click NEXT.

If you select the CUSTOM INSTALLATION, a dialog appears where you can choose any desired components.

By default, all options are selected, as indicated by the blue icons next to the respective components. If you wish to remove individual components, click a filled icon to deselect the option. Blank icons indicate components that will not be installed. A gray main group icon means that only some of the components are to be installed. Open the main groups by clicking on the plus sign beside the name, and select the components you wish to install by clicking the respective icon.

If you click the plus sign beside the name of a component, the list with sub-components appears. Here again, you can install the respective component by selecting the entry. Deselect a component if you do not wish to install it. If you select only some of the installable filters, for instance, the little boxes appear in gray.

In compliance with legal restrictions, the installation of the available linguistic modules (spell-checker and thesaurus) is limited to 3 modules at one time.

You can use the DEFAULT button, to restore the original settings.

◆ After you have chosen the desired modules, click the NEXT button.

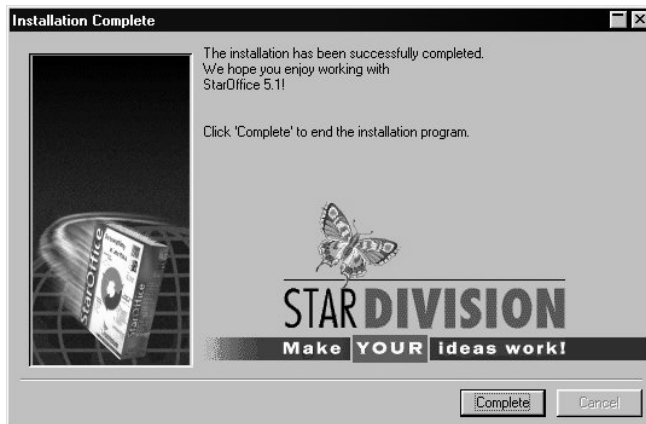

Now starts the copying process.

Click the COMPLETE button to continue to the next dialog.

In the Setup main window, the progress of the installation is indicated.
The installation is now ended.

Click FINISH

Next, each user can set up his own user installation on his hard disk

User Installation

In the network, each user can perform a User Installation under his login name using the setup program from the Network (Server) Installation.

Requirements for the User Installation

In the directory, where you wish to install, 2 to 3 MB free space are required.

Starting the Setup Program by the User

Prior to running the User Installation's setup program, a Network Installation has to be executed successfully.

Login to the system with your user name.

Switch to the installation directory on the server with the File Manager . For example, you can use the following command :

If you have already installed a previous version of StarOffice, check if the .version.ini file can be found in your system directory. This file indicates the path and version number of the installed StarOffice version. If the installation you intend to run has the same version number, a new installation can only be run after the previous has been deinstalled.

Run the Setup.exe program from the Network Installation's directory on the server.

In OS/2, double-click the SYSTEM icon on the work area, then in the new window, double click the command line symbol and finally double-click the OS/2 WINDOW in the last dialog.

In the OS/2 window, enter the following command:

Y:\Programs\Office51SetupFiles\setup.exe

and press Enter. "Y" represents the letter of the network volume and has to be replaced with the appropriate letter.

If you start the User Installation from the server's installation directory, you don't need to pass any optional parameters.

The Setup Dialogs

You see now a dialog which asks you to enter a key.

- ♦ Choose among the three options the one which corresponds to your StarOffice edition:

Registration Key

Choose this option, if you downloaded StarOffice from the Internet. You can also choose this option, if after purchasing your StarOffice Personal Edition Deluxe, you find a registration key with the invoice, or if you want to install StarOffice with the same user's data stated on the invoice.

When downloading StarOffice, you entered your User information and received a customer number and a registration key. However, if you bought the program directly from Star Division, you can find on your bill a customer no. and a registration key. This customer no. and registration key are only valid for the information stated on the bill.

If you loaded StarOffice from a different ftp-Server, you will not have a customer number or a registration key. Go to our http-Server (www.stardivision.com/freeoffice) and enter your information there, just as if you want to start a download. After this procedure, you will have your customer number and your registration key. You will not need to run the download again. You'll find more information concerning the StarOffice registration in our Homepage (www.stardivision.com) and in the StarOffice Help under "REGISTRATION".

Enter the customer no. and the registration key in the ENTER THE KEY CODE dialog. Please note that you'll again need to enter exactly these two numbers ENTER USER DATA dialog.

After that, your StarOffice version will be a completely installed full version. A further registration won't be necessary.

Company and Campus Key

Choose this option if you have a Star Division Company or Campus edition. Enter the data you received in your StarOffice version.

Media Key

Select this option, if you received the StarOffice version in CD-ROM. Enter in the field your media key extra enclosed with your CD-ROM. That enables you to have a StarOffice 30 day version. That means, that within 30 days you have to register your version by StarOffice, so that it becomes a full registered version. The registration is cost free (apart from eventual online or postage costs). You can find further information concerning registration in our Homepage www.stardivision.com and in the StarOffice Help under "Registration".

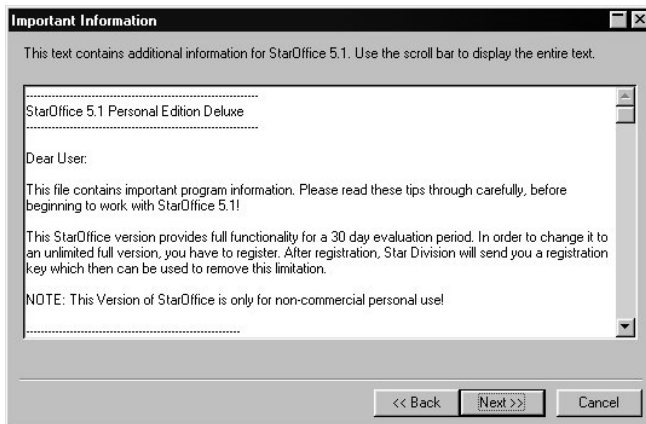

- ◆ After entering the key, click NEXT.

You see now the ENTER USER DATA dialog.

- ◆ A dialog appears where you can enter your personal user data.
- ◆ The data you specify here will be automatically inserted in the fields of the letter, fax or business card templates from StarOffice.
- ◆ You will be able to access this dialog later on via menu **TOOLS - OPTIONS - GENERAL...** on the page **USER DATA**. On later modifications of these files a new registration might be necessary. Further information concerning User Data and Registration can be found in **HELP - REGISTRATION**.
- ◆ Click **NEXT** to continue the installation.

- ◆ A dialog will display again the registration's data depending on your installed edition.

Now appears a window with the content of the readme.txt file. In the StarOffice directory, you can open and read this file after the installation.

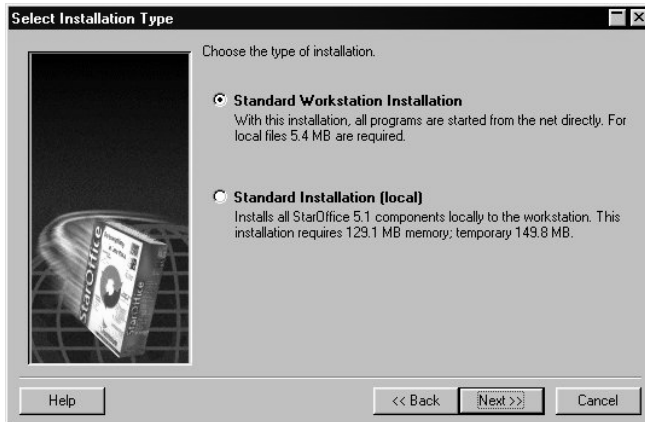

- ◆ Read the readme file and confirm with a click on the NEXT button.

You see now a window with the license agreement.

- ◆ Please read carefully the license agreement. If you agree on everything, click ACCEPT to continue the installation. If you do not agree with the license agreement, click CANCEL. In this case StarOffice won't be installed.

- ◆ Click ACCEPT if you read and accept the license conditions and you want to continue the installation.

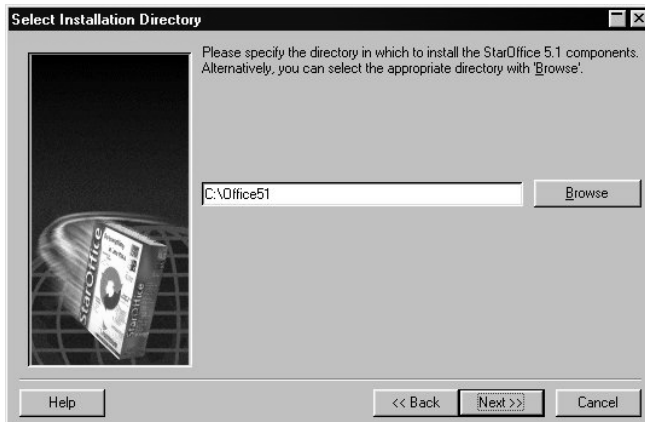

Select the **STANDARD WORKSTATION INSTALLATION**. This installs only the files that contain variable user data. Click the corresponding option.

The **STANDARD INSTALLATION LOCALLY** will install a complete version of StarOffice on your local hard disk and can be source of a Server Installation.

Selecting the installation directory

After entering the required information, click Next. In the subsequent dialog, you can choose the desired installation directory.

You can either **BROWSE** to select the directory where to install or type the path in the text box directly.

Click **NEXT**

Now starts the copying process.

Click the COMPLETE button to continue to the next dialog.

A dialog will be shown, which lists registered Java-versions in your system.

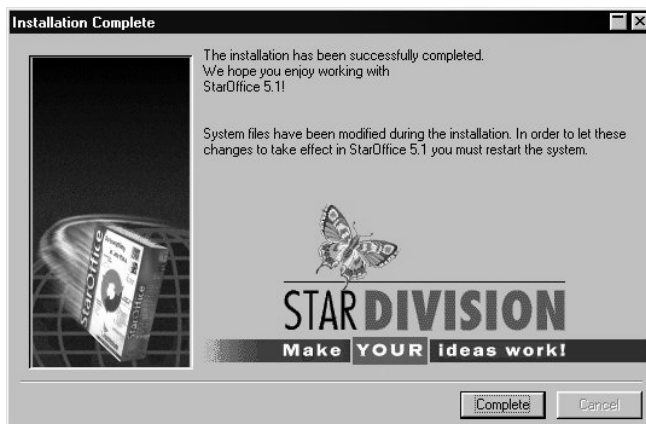

Choose here which Java runtime environment you want to use . StarOffice internally uses Java also for the processing of JavaScript You need to use the Java Runtime Environment of the 1.1.6 version or higher. If you've already installed a new version as 1.1.6, you don't need to install the standard version.

Select the desired option and click OK.

In the Setup main window, the progress of the installation is indicated.

The installation is now complete.

Click FINISH.

You can find an appropriate command on your screen, if you want to start StarOffice after the completed installation

With the StarOffice, some particular fonts should be installed (StarBats and StarMath Fonts). These fonts are required as special characters for both, some numbering/bullet styles and the StarOffice equation editor StarMath.

Sometimes, it may be necessary to restart the your system after having installed StarOffice 5.1.

After installation, a new folder appears, containing all StarOffice related programs and files. Additionally, a "sversion.prefs" file has been created (corresponding to the sversion.ini file in the Windows version)

Appendix

Modifying the Installation

After the StarOffice installation, restart the Setup program. In the first dialog you'll have the possibility to modify, to repair or to completely deinstall your current installation.

Modify Installation

If you click the **MODIFY** option, the same dialog as for the **CUSTOM INSTALLATION** appears.

The small white boxes represent the components which were not installed. Click a small box and it will turn blue, which means that this component is now installed.

The blue small boxes indicate you the components which are already installed. Click on a blue box and it will be highlighted in red which means that it has been deleted from the installation.

A plus sign before the component indicates you that it is a group of components which you can open by clicking the plus sign. Once it is open simply choose which components you want to install or to delete.

Note that the Graphic filters under the "optional components" are performed.

Repair Installation

The Repair option can be used to update / correct the entries in your systems registration database. Additionally, unintentionally deleted files are restored if possible.

The soffice.ini file in the Office51 directory contains, among others, information about the windows' division, the icon bars etc. If the file is missing, the next time you try to start StarOffice it will try to start in the Repair mode. If it can't, an error message is displayed.

Delete Installation

If you are upgrading your StarOffice version (e.g., from StarOffice 3.1 to 4.0 or from 4.0 to 5.1), you can save hard disk space by de-installing the previous version. Please read the appropriate information in the readme file of your "old" version. But, if you want to upgrade to a newer version with the same version number, you can use the StarChannels (using the respective option from the Help menu).

In the readme file of the appropriate version you may also find notes about running two different version in parallel.

- ◆ Prior to deinstall StarOffice, you have to run the setup program. If an identical version of the program is detected (via the respective entry in the sversion.ini file), the Deinstall option is shown in the main dialog of the setup program.

The Deinstallation removes the StarOffice entries from the registration and the sversion.ini file. Almost all files and StarOffice directories will be then deleted, except those which you created or changed and those which the Setup program needs. Your programs and most of settings remain the same.

After deinstallation, all modified directories and files are retained, e.g., your documents, bookmarks, clipart, etc. The files required for the setup program are not removed, too. These files can be deleted manually, if desired. If some files cannot be deleted (because they are used) you have to do so after restarting the operating system.

As superuser, you can deinstall the network installation, by simply deleting the entire server installation directory. Of course all user installations (based on this server installation) are deactivated.

Parameters for the Setup Program

The Repair option can be used to update / correct the entries in your systems registration database. Additionally, unintentionally deleted files are restored if possible.

The parameter /net or /n starts the Network Installation on a server (as described above).

Use the /D parameter to pass the installation path directly following the syntax /D:destination_path.

To start an application immediately after installation, use the /F:application_name parameter
