NPUNZIP

What's that ?

npunzip is a netscape pluggin (version tested are os2web 1.1,mozilla build 20020221,
and of course ns 4.61 build 010615) that handles zip files.

How to install-it ?
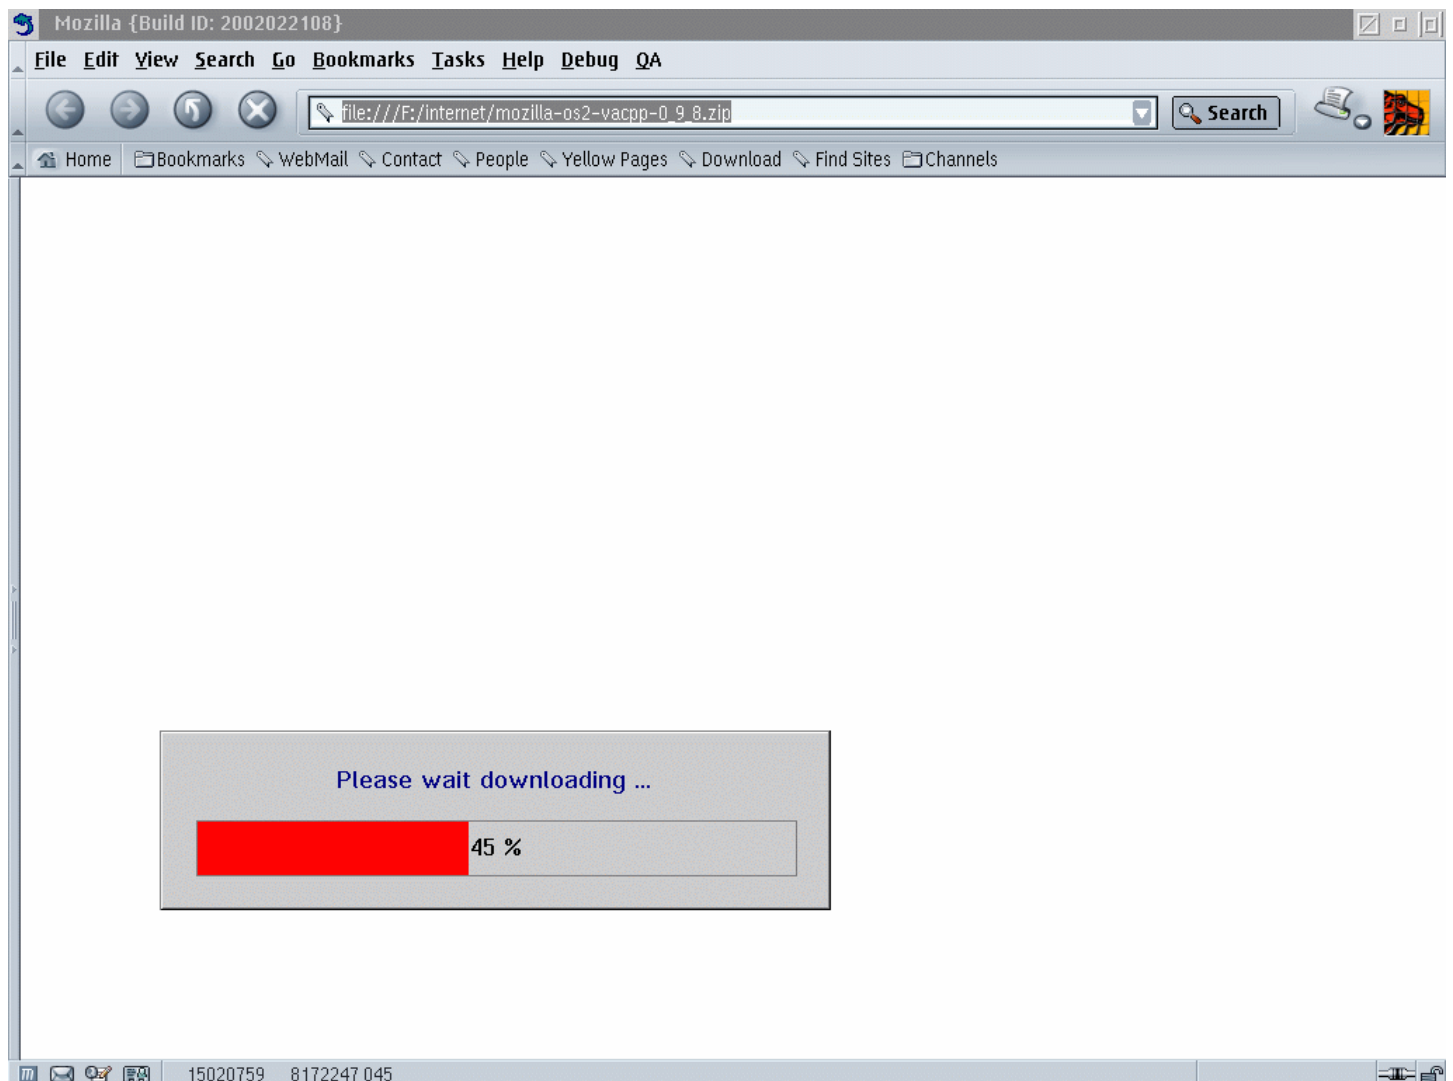

For os2web just copy npunzip.dll to \os2web\plugin
For mozilla just copy npunzip.dll to \mozilla\plugins
For NS4.61 just copy npunzip.dll to \netscape\program\plugins
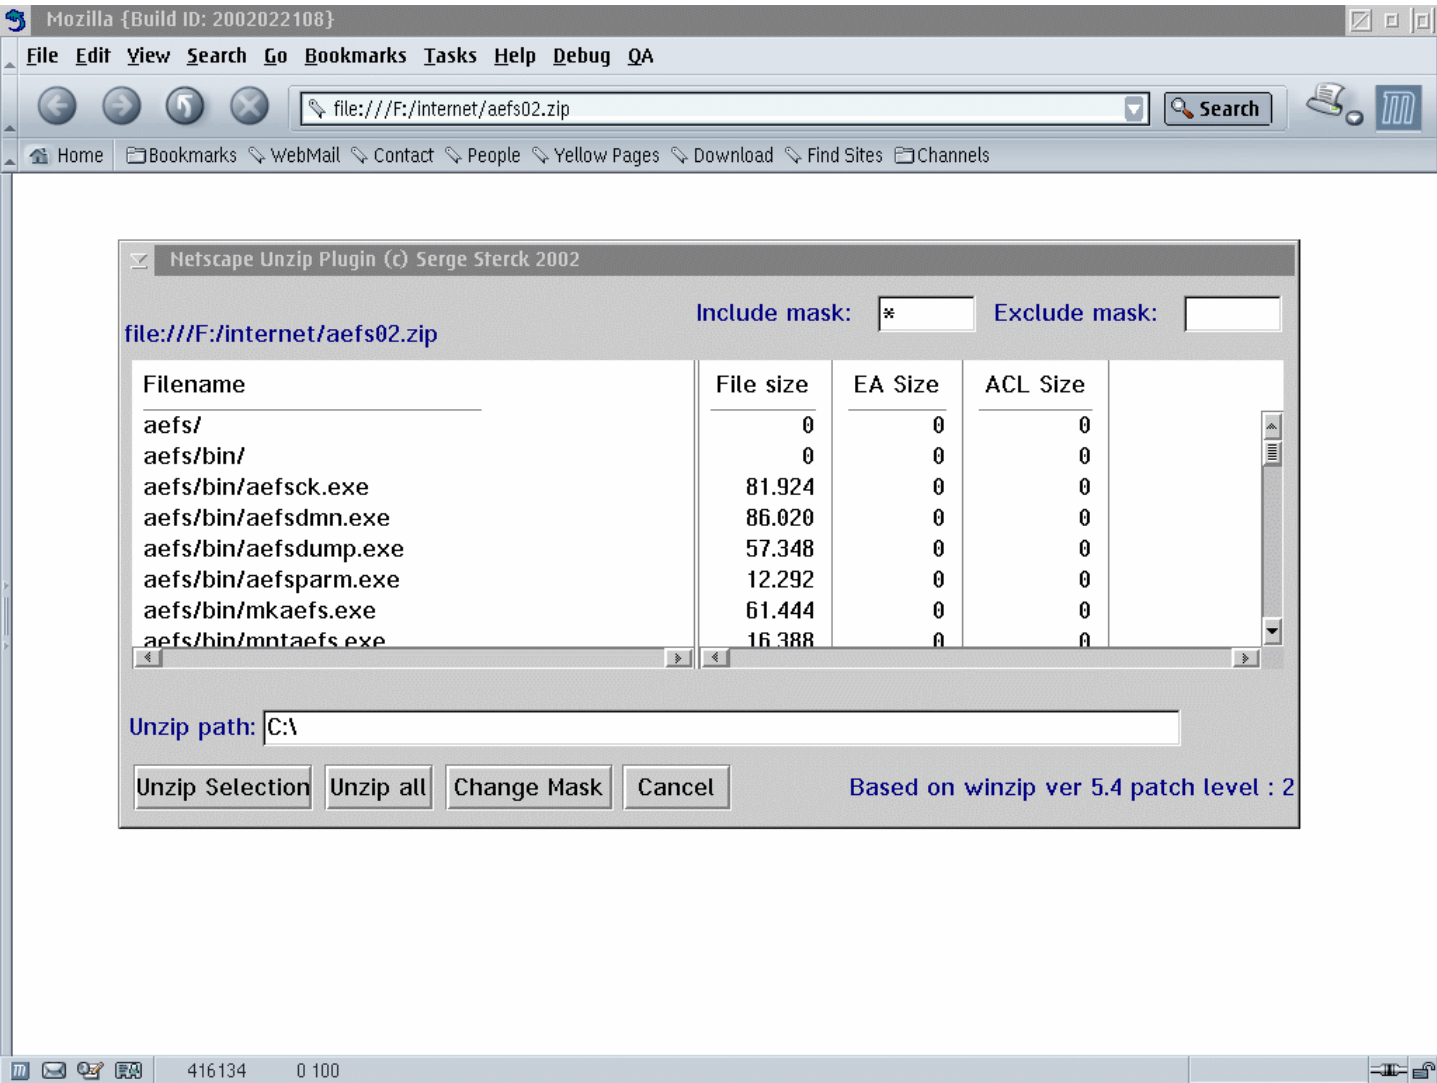

How it works

when your browser see a extention zip it launch the pluggin. The pluggin download your zip file into
the root boot driver as a file called tmp.zip See figure 1.

Figure 1.

After downloading your file the pluggin display the content of the zip file see figure 2.

Figure 2.

What can we do with this display ?

You type in the include mask let's say *.exe than push the change mask the pluggin show you only the file with the *.exe extension see Figure 3. You can also specified a exclude condition in figure 4. we want to exclude all the *.exe files. Just type *.exe in the exclude box and push the change mask button. You can of course mixed
the two stuffs.

Figure 3.

Figure 4.

<u>How to unzip?</u>

Just fil the unzip path and push unzip all to unzip all the zip file to the unzip path or select the files you want a push unzip selection.

I hope this pluggin helps end user if you have questions or requests please mail me at
