INJOY FIREWALL™ 3.0 - FINAL!

Forget about run-of-the-mill commercial firewalls, illogical hardware devices and expensive consultants.

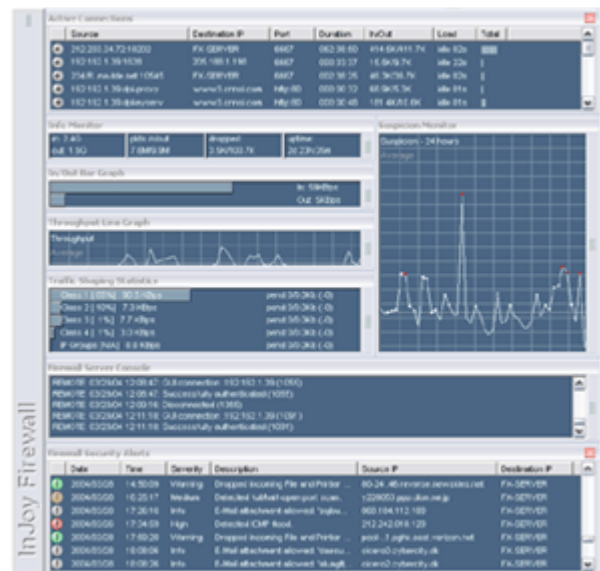

InJoy Firewall™ 3.0 is the easy, multi-purpose security application you have been looking for. It provides a wide range of cutting-edge features and utilizes next-generation IDS technology to deliver world-class Deep Packet Inspection security.

With this new release of our flagship product, we sum up our accumulated experience of more than 8 years and fulfill our vision of delivering an accomplished industry-leading connectivity and security solution – with full platform coverage.

InJoy Firewall™ now supports:

- ☛ **Linux**
- ☛ **Microsoft Windows XP Home/Pro.**
- ☛ **Microsoft Windows 2000/2003 Server/Pro.**
- ☛ **eComstation(tm) 1.x**
- ☛ **IBM OS/2 Warp(R) 3.x/4.x/Server**
- ☛ **IBM OS/2 Warp(R) Server for e-Business**

The NEW intuitive user interface is highly customizable, allowing you to efficiently control, monitor and manage Firewall Servers - locally or remotely, and even across different OS Platforms.

More than anything, we have aimed at creating a quality tool that will empower our users to easily conduct safe business over the Internet. No matter what OS platform or protocols you are connecting, whether you focus on top-notch dynamic security or transparency, manageability or

simplicity, Server or Client, then our new software delivers one of the most intuitive and business-friendly solutions.

InJoy Firewall™ has become what the name implies; a powerful "FEEL-GOOD" product — easy for the average user, and a MUST-HAVE for advanced users. Install it and become an INSTANT SECURITY PROFESSIONAL with complete authority over your Internet connection and real-time transparent insight into almost any network activity.

A HOT NEW DESKBAR application (for MS Windows ONLY) now enables you to casually keep an eye on the "intrusion score", while preserving desktop space for other work. You can even use the TOOLBAR to monitor remote firewalls.

The unique InJoy Firewall Deskbar application.

InJoy Firewall™ is the ONLY Firewall in the security market that offers a total end-to-end multi-platform software solution. It solves the overwhelming problems related to managing multi-vendor security devices, now making it easier than ever to build enterprise-wide IPSec VPNs and set up identical cross-platform end-point security.

The simple VPN Wizard for quick VPN configuration.

Basic features include: 10+ Pre-configured Security Levels, Internet Gateway support, IPSec VPN tunnels, Bandwidth Management, Web Filtering, E-mail SMTP Server Protection, Remote Management, comprehensive rule-based Packet Filtering, PPPoE, and much more...

InJoy Firewall™ is the ULTIMATE firewall solution for businesses of all sizes. It allows you to put an end to the cost, confusion and complexity of managing multiple security devices. Use the power and simplicity of InJoy Firewall™ Pro to take control of your network security today.

Among the FUTURE enhancements, we are planning improved "Personal Firewall" features and support for yet more Platforms. This is not to say that InJoy Firewall™ is not good for personal use, but merely to indicate that we will be adding more of the traditional personal firewall features.

We will also continue to improve the product overall, including VPN, connectivity, user-interface and overall security features. Together with partner companies we are currently evaluating whether to release a hardware edition of the InJoy Firewall™, and also a packaged retail edition.

#2/2004

Important news from F/X Communications!

INJOY DIALER™ 3.0 **(SOON TO BE RELEASED)**

While dial-up access is definitely on the retreat, the InJoy Dialer continues to find new areas of use and it's still one of the most powerful Internet dialers in the world.

The InJoy Dialer™ is currently available for download as a version 3.0 Release Candidate - with final release scheduled within the third quarter of 2004.

InJoy Dialer 3.0 offers the same multi-platform firewall and VPN features that you will find in the InJoy Firewall™.

You need the Multi-Platform InJoy Dialer™ when the dial-up networking capability of your operating system just isn't powerful or flexible enough. On Windows, you might want to just use the InJoy Firewall™ product on top of the built-in Windows Dialer, however on OS/2 and Linux this is not technically feasible and then you need the InJoy Dialer™.

The InJoy Dialer™ 3.0 is a completely self-contained multi-platform PPP dial-in and dial-out Internet Dialer. Through its range of mission-critical connectivity features — optimized for traditional phone lines and ISDN — it offers unattended operation and robust [24/7] connections.

Next Generation Firewall protection, gateway capability, and enterprise-grade IPSec VPN capability makes InJoy Dialer™ the perfect choice for dial-up based embedded systems, home-network gateway, mobile workers, remote offices and unattended use (such as ATM and POS terminals).

INTRIGUING OPPORTUNITIES

F/X Communications is looking for more software distributors, value added resellers, and network security consultants!

We offer regional pricing and standard commissions of up to 40% — depending on volume and support requirement.

Contact F/X Communications at sales@fx.dk today and be part of our success!

STAY INFORMED

Being able to reach customers with the most important information is essential to any business and its customers.

To get only the most important news from F/X Communications, please subscribe to our news mailing list at:

www.fx.dk/maillist.html

E-mails to this list are rare and yet allow you to stay informed with regards to major releases, new technology and major security threats — without having your mailbox flooded with less significant news that you might not want.

HELP US

As the net gets bigger, it gets harder to remain visible to new potential customers.

F/X Communications is a small company that has always relied heavily on customer feedback and promotion via word of mouth.

We still need your help:

- ☞ Tell us about the bugs you find (support@fx.dk)
- ☞ Provide us feedback - we read it all
- ☞ Add a link to our home page (www.fx.dk/resources.html)
- ☞ Tell your friends about the quality and benefits of our software
- ☞ Ask your local magazine for a review
- ☞ Demonstrate our software at your local user group
- ☞ Include our software on your demo-CDs
- ☞ Share your knowledge with other users (on our mailing lists)

We at F/X are interested in motivated users only and not looking for aggressive marketing campaigns. We have always enjoyed a close relationship with our customers — businesses and individuals alike — and in return wish to help where we can - be it website sponsorships, software donations, reciprocal links, software customization, or support in general. It never hurts to ask.

Thanks in advance!

OTHER PRODUCT DEVELOPMENTS

IPSEC TOOLKIT

www.fx.dk/ipsec-toolkit.html

The IPsec Toolkit is enabling technology offered to large organizations that need to deliver IPsec VPN capability to their own customers. The IPsec Toolkit has been one of our most successful products in 2003, leaving competition in awe and customers wanting more.

Among the major new features is NetOctave hardware acceleration, with which we achieved more than 250Mbit per second (using 3DES encryption, a NetOctave board, and normal Intel based PC equipment). This score is among the highest ranking in the industry and thus pulled some industry head-lines:

www.cyberguard.com/news_room/press_releases_040112.cfm

Further, the high performance allowed a specific customer to use the F/X IPsec Toolkit to test the performance of other market-leaders. Here is why they selected the F/X IPsec Toolkit:

"[...] A toolkit that could scale linearly in our environment, that keeps current with functional standards, could be easily tailored to our product without architectural changes, and would exceed the quality offered by our customers. Both the F/X product offering and technical support has exceeded our requirements and expectations. [...]"

www.fx.dk/press-100803.html

IPsec Toolkit major NEW features:

- Multi-Platform support (Win 9x/ME/NT, 2000, 2003, XP, Linux (all), Unix, OS/2, eComStation, more...).
- High-performance AES and Blowfish encryption
- NAT-Traversal (Easy deployment of IPsec behind NAT)
- Group Authentication (For improved Cisco interoperability)
- Fail-Over and Fail-Back
- RSA signatures
- Extended Authentication version 6 (X-AUTH v6)
- Quick VPN Wizard
- IPv6 (Linux only)
- Improved third-party interoperability

Expected features in 2004:

- X.509 (pending release)
- Fingerprint authentication (in early stages)
- Much more...

The InJoy Firewall™ naturally uses our own IPsec Toolkit, keeping the Firewall affordable and always packed with the latest cutting-edge VPN features.

PACKET INTERCEPTING / NDIS TOOLKIT

www.fx.dk/ndis-toolkit.html

The Packet Intercepting / NDIS Driver Toolkit is a business offering that came into existence out of a very simple need. F/X's InJoy Firewall™ software needed to safely intercept ALL incoming and outgoing IP packets from the networking subsystem (not just Winsock traffic).

Once IP packets are intercepted, they needed to get efficiently transported to a simple user-land application, in which they would get handled as necessary. The Toolkit offers this capability, and more, uniquely across multiple operating systems

So why make this into a product? Well, writing truly solid drivers is a breath-taking challenge that many companies would like to avoid. When we started we weren't quite aware just how challenging it would be, however at this point, we believe we can help others by offering our proven technology.

This toolkit makes it easy to:

- Intercept IP packets as they flow through existing Ethernet Network Cards (and Dial-Up WAN adapters on Windows).
- Send, receive and filter RAW Ethernet Frames (IP traffic).
- Completely avoid device driver programming. Your application operates solely in user-land, thus avoiding kernel space complexity and limitations.
- Easily query LAN adapter information.
- Use an OS platform unified interface for supporting multiple Operating System platforms, including Windows, Linux, FreeBSD and OS/2.
- Easily install and uninstall required components, using manual OS driver installation, scripted, or programmable installation.

To top off this offering, we offer 5+ test programs to illustrate anything from the simplest possible network application to a complete hardware accelerated IPsec Client/Server. Never has it been easier for businesses to get started in the networking market.

"[...] F/X Communications provided us with a framework that allowed us to shorten our development time; Instead of spending months on research and testing, we had a basic client ready in just a few days. [...]", said Marc Kurtz, Lead Engineer, Backbone Security's Ribcage product line.
