

WebPack for OS/2[®]

Highlights

Enables current Web technologies on any OS/2 desktop

Complete software solution for cost effective, comprehensive Web enablement of the operating system

Based on industry leading technology licensed from Sun Microsystems, Macromedia and others

Designed for enterprise class network deployment and centralized management

Comprehensive support and consulting offerings available

Endorsed and supported by IBM

**More information at
<http://www.innotek.de>**

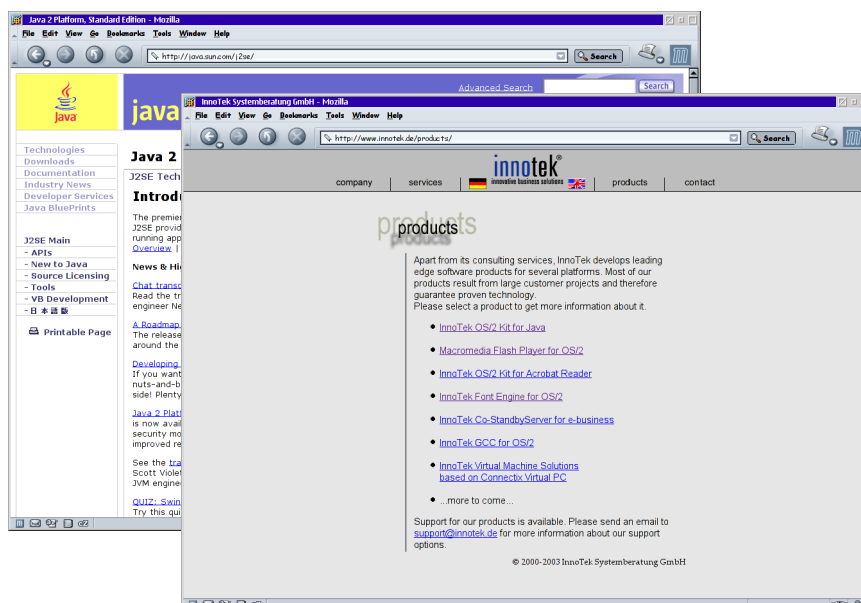

IBM's OS/2 operating system has a good reputation for its stability and low Total Cost of Ownership – one of the reasons why it is still so broadly used in certain industries. Its solid and comprehensive TCP/IP stack provides a good foundation for Internet/Intranet applications. On top of that, IBM is providing the latest Web browser technology through their Mozilla-based "IBM Web Browser for OS/2" while the Open Source community is constantly updating the OS/2 versions of Mozilla.

However, accessing modern Internet pages or deploying state-of-the-art Intranet applications often requires a lot of "plug-ins" and "add-ons" to the browser that have traditionally not been made available for the OS/2 platform. This severely limits the possibilities for delivering cross-platform web based applications during the transition period.

Extending the OS/2 platform to support the latest Web technologies

With InnoTek WebPack for OS/2, corporations can start getting productive on the Internet or their corporate Intranet right away through the most comprehensive set of web functionality ever available for OS/2. WebPack for OS/2 consists of the following components:

- **InnoTek OS/2 Kit for Java** addresses the needs of enterprises still running the IBM OS/2 platform while requiring access to the latest Java technology from Sun Microsystems, including a browser plugin.
- **InnoTek Font Engine** closes the gap between web page displaying on OS/2 and other platforms by enabling state-of-the-art technologies like anti-aliasing, subpixel rendering and hinting within the browser environment.

Mozilla for OS/2 with WebPack for OS/2 installed

- **Macromedia Flash Player for OS/2** lets you run web based interactive multimedia applications within your OS/2 web browser.
- **InnoTek OS/2 Kit for Adobe Acrobat Reader 4.05** enables the widely spread cross-platform PDF document format on OS/2. A browser plugin is included.

Seamless integration into your OS/2 environment

Specifically designed to meet the needs of large corporations, the InnoTek WebPack is as simple to use as it is easy to deploy and maintain. The browser provides most of the user interface, so there is no learning curve. And users will immediately see the huge improvements in their daily work environment.

Endorsed by IBM

Because of InnoTek's good reputation as an IBM business partner, IBM explicitly encourages OS/2 customers to take advantage of our products. IBM fully supports systems running InnoTek WebPack for OS/2 and extensive testing ensures compatibility across different operating system versions and languages, including DBCS support. See <http://www-3.ibm.com/software/os/warp/strategy/> for details.

Cleverly engineered - competitively priced

Making use of InnoTek's unique

Win32 porting technology, we can produce robust, performant OS/2 versions of popular Win32 applications with very little effort – meaning low development costs that translate into low prices and the guarantee that we will continue to support all OS/2 customers in the foreseeable future – according to IBM's roadmap. Realizing that most corporations are not planning to heavily invest in the OS/2 platform anymore, we are offering the InnoTek WebPack for OS/2 at extremely competitive prices. Plus, we are including 12 months of free defect support.

Number of seats	Price per seat
100-499	49,00 €
500-999	45,00 €
1.000-1.999	40,00 €
2.000-4.999	35,00 €
5.000+	30,00 €

Support

WebPack for OS/2 is fully supported by InnoTek. Comprehensive support options are available including:

- proof of concept installations
- rollout support
- product support via email, web and telephone for product use and defect related inquiries

With WebPack for OS/2, your company is able to benefit from state of the art Web technology on top of your proven OS/2 environment for maximum investment protection

IBM TCO (Total Content Ownership) customers can choose to receive TCO builds of InnoTek's WebPack at very competitive pricing.

About InnoTek

With our profound background in software design and development, we have become the leading solution provider for OS/2 environments. Fortune 500 companies around the world work with InnoTek's products, making them the premier choice for enterprise customers.

InnoTek WebPack for OS/2 at a glance

InnoTek WebPack for OS/2 provides extended Web client features on top of IBM OS/2. software.

Hardware requirements:

- PC system supported by OS/2
- Athlon, Duron, K6-III, Pentium II, Pentium III or Pentium 4 with 300MHz or better
- Minimum 16MB RAM in addition to the requirements of the operating system and applications used
- OS/2 supported graphics card (GRADD display driver recommended)

Software requirements:

- OS/2 Warp, Version 4 or higher, IBM Web Browser 2.0 or Mozilla 1.4 or higher
