To Our Valued Customers:

As we approach the year 2000, Dallas Semiconductor is receiving more frequent questions with regard to year 2000 compliance of our products. Dallas Semiconductor has been working on Year 2000 (Y2K) product plans for some time and reports the following.

Dallas Semiconductor products fall into one of three categories:

1. Products that are Y2K compliant (logic includes century digits).
2. Products that are Y2K compatible (correctly calculates leap year through 2099, but requires other software to calculate the four-digit year).
3. Products that do not have date sensitive logic and, therefore, do not require Y2K compliance.

Each product marketing group has prepared a statement with regard to how Y2K issues affect their products. The letters are stored as PDF files and can be downloaded and printed using Adobe Acrobat Reader. If you do not have a copy of the program, you can go to Adobe's Web site located at <http://www.adobe.com/prodindex/acrobat/readstep.html/>

Please select one of the following groups to view the Y2K statement:

- [Automatic Information](#)
- [Battery Management and Thermal Products](#)
- [CPU Supervisors and Digital Potentiometers](#)
- [Microcontrollers](#)
- [NVRAM and Delay Lines](#)
- [Telecommunications](#)
- [Timekeeping](#)

If you have further questions with regard to Y2K for a specific product within a group, please contact the product manager for that group.

Thank you for choosing Dallas Semiconductor as your component supplier. We look forward to supplying you with quality Dallas products well into the next century.

Sincerely,
Dallas Semiconductor
