IBM PS/2 - Memory limitations (8570, 8580)

Service Information:

8570/80 systems support a maximum of 16MB of memory. Installing more than 16MB may cause unexpected results with diagnostics and/or machine operation. The 8570/80 diags are not intended to operate in any machine with more than 16MB installed. False errors may be generated.

If errors or unexpected results are encountered, the amount of memory that exceeds 16MB must be removed before performing Problem Determination (PD), running diagnostics, or replacing any parts. Additional information is contained in the IBM Personal System/2 Hardware Maintenance Manual (HMM) (S52G-9971.)
