

Welcome to the prerelease demo version of the Adobe® Acrobat® Viewer. The viewer, written entirely in Java™, is designed to be used as an application, applet, or JavaBean™ to allow for viewing PDF files on systems where a Java Virtual Machine is installed. The viewer is an OEM product that can be licensed for a fee to bundle with Java-related products or to be used for custom Java development by integrating it into your products using the bean interface. Details on licensing will be made available at a later date when the final product is ready for distribution. Note: this demo version of the viewer can only run as an application.

For more details on licensing when they become available contact us at: javaviewerlicensing@adobe.com
To sign up to become part of the official beta program or to report bugs contact us at: faultline@adobe.com

Adobe has also recently released Adobe Acrobat 4.0, which makes collaborating and sharing documents a breeze. Acrobat 4.0 delivers a rich set of annotation tools, support for digital signatures, and the ability to convert web pages to PDF files for offline use or archiving. For more information or to purchase a copy go to <http://www.adobe.com/prodindex/acrobat/main.html>.

Note: this product is a pre-release version and may contain bugs, errors, and other problems that could cause system failures. As such it is provided "AS IS" with no support and Adobe disclaims any warranty or liability obligations to you of any kind. See license agreement for further details.
